Founding-stage Product Manager focused on activation, engagement, and conversion for 0→1 and 1→10 products. Ships fast by pairing product judgment with hands-on data work (SQL, PostHog, Mixpanel) and AI-native / vibe-coding tools (Claude, Cursor, antigravity) to go from problem to live product prototype without waiting on a full eng team.

EDUCATION

Maharaja Surajmal Institute Of Technology
B.Tech in Information Technology

New Delhi, India
2022 – 2026

EXPERIENCE

Scoobyzy (Live)

Founding Product Lead

Remote

Mar 2026 – Sep 2026

- Own the product end-to-end – requirement gathering, market research, competitor analysis and shipping a fully functional user and vendor app – working directly with an engineer and designer through the full build cycle.
- Defined user flows, feature scope, and product roadmap using Agile methodology, cutting engineering hours by 30%.
- Used Stitch and ChatGPT to design user flow screens, design variations and UI for both the vendor and user apps.
- Collaborated with the developer to understand the app's architecture, vendor-user matchmaking across four services: grooming, vet consultation, boarding, and walking.
- Led pre-launch product readiness, QA coordination, and go-to-market strategy for the Delhi NCR launch (June 2026).
- Suggested many useful features by talking to the target users like - Dog care tips, care packages by popularity, dog profiles and an online marketplace for pets which is under process

Lobb Logistics

Product Management Intern

Bengaluru, India

Jan 2026 – Jun 2026

- Worked on adding a truck filtering feature to improve the search experience for the user according to the freight requirements. Collaboration with engineering and sales.
- Redesigned the truck booking user journey, cutting booking steps by 40% and new transporter onboarding time by 30%.
- Tracked and analyzed B2C product metrics – conversion, retention, engagement – using SQL and Mixpanel to identify drop-off points and prioritize fixes; supported A/B tests to optimize user journeys.
- Ran competitor and market research in the logistics B2C space to inform feature prioritization and roadmap decisions.

PROJECTS

TODOonSTERIODS – Vibecoded on Orchids, Next.js, TypeScript, Tailwind, PostgreSQL

[Live Link](#)

Identified the problem firsthand while preparing for semester exams: no structured, course-style dashboard existed to plan and track exam prep the way platforms like takeufoward.org do for their courses. Scoped the **product end-to-end** – study plans, monthly/weekly goals, and daily task tracking – and defined the auth, data, and payment flows. **Vibe-coded and independently shipped** the live, full-stack product using **Orchids**, taking it from idea to live app

SubTrackr - Subscription Reminder Pro – Orchids, Next.js, TypeScript, Tailwind, Drizzle, Turso, Stripe [Live Link](#)

Spotted the pain point through requirement gathering - reading Reddit threads where users vented about forgetting recurring subscriptions and getting blindsided by renewal charges. Ran **market research** on existing subscription trackers to find gaps in reminder, reasons were users missed billing emails, then scoped the **product end-to-end**: solution I figured out was to send multiple reminder whatsapp messages of billing, Vibe-coded and shipped it live using **Orchids**, from pain point to production

SKILLS

Product: PRD Writing, Agile, User Journey Mapping, Activation/Retention/Conversion Funnel Analysis, A/B Testing & Experimentation, Competitor Analysis & Market Research, Wireframing, MoSCoW & RICE Prioritization
Data & Technical: SQL, PostHog, HTML, CSS, JavaScript, APIs, Databases, Git, Figma, Notion, Jira, MS Office Suite

AI / Vibe-Coding: Claude, Cursor, Orchids – used to independently build and ship full-stack products end-to-end
Soft Skills: Clear Communication, Strategic Thinking, Problem Solving, Documentation, User Stories, Fast Learner, Multilingual, Curious
